

ABSTRACT OF THE DISCLOSURE

An internal unit is incorporated in a body of a submarine apparatus. The internal unit comprises a plurality of system units placed in a
5 predetermined arrangement, and coupling bars fixed to coupling-bar fixing surfaces of the system units by screws so as to couple the system units in the predetermined arrangement. The system units include at least one electronic-circuit printed board having
10 a part to be adjusted. The coupling-bar fixing surfaces are located at positions shifted from the electronic-circuit printed board.
